

## Air Conditioner Service Coupon

DWD2 Treatment is for customers concerned with foul odours coming from their air ventilation system.

This usually right after engine start up, and dissipates in 1-3 minutes.

We install a fitting in the evaporator case and inject a disinfectant foam. The foam cleans and deodorizes the inside of the A/C heater system, turns into a liquid and drains out the evaporator drain tube. The 1st installation is \$119.95 which includes the installation of the evaporator nozzle, product, and labour to foam. All cleaning after initial service is only \$79.95 as the nozzle installation has already been performed. In the past the entire evaporator case would have to be disassembled for hundreds of dollars and if the odour came back, you would have to disassemble everything all over again.

This service can rid customers ventilation systems of foul odours and save them hundreds of dollars.
